

PRODUCT RELEASE NOTES

LABEL MATRIX[®]

Version 8.10

TEKLYNX International

June 1, 2007

LABEL MATRIX® Version 8.10

LABEL MATRIX 8.10 delivers fixes and corrections, new printer drivers and printer-specific fixes and corrections that have been made since the release of version 8.00.03. This release notes document highlights the features and corrections made in version 8.10.

LABEL MATRIX 8.10 is available in three main editions:

- LABEL MATRIX QuickDraw (LMQD)
- LABEL MATRIX (LM)
- LABEL MATRIX PowerPro (LMPP).

All editions are shipped with an English Installation Guide, Quick Start Guide and CD.

New Features

- Added support for the Windows Vista operating system.
- Added ability to control the Write Data function using an LMWPrint command line switch.

New Printer Drivers

The following Extended (X) printer drivers have been added in LABEL MATRIX 8.10:

Fixes and Corrections

- Fixed issue where the bar code null character was encoding an ASCII character in the bar code instead of a null value.
- Fixed issue where the EAN-UCC 14 bar code did not have a Mod 10 check digit if printed on an HP LaserJet printer.
- Fixed issue with saving a .QDF file when sharing the file and first opening as Read Only.
- Fixed issue with the Image Formatting Toolbar where the Font drop-down list would appear grayed out if the user previously opened the .QDF file as Read Only.
- Fixed issue occurring when editing a shape where the background color would change when the Color tab was selected.
- Fixed issue with a rectangle printing instead of a diamond.
- Fixed issue where the border thickness could not be changed via the Image Formatting Toolbar for filled objects.
- Fixed issue with Keyboard Input images causing the user to press the Quit button before the job would print.
- Fixed issue where the application would hang when printing duplicates.
- Fixed issue where the application would hang if another application using VB called the LMWPrint command shell.
- The sample label file sample01.qdf now points to the correct location for the ex1.dbf database file.
- Fixed issues occurring when changing the printer port from Spooled to Unspooled.
- Fixed issues occurring with USB print spooling enabled where if you printed and closed the program, a memory error was generated.
- Many dialog boxes and controls on the dialog boxes were enlarged to better display information.

Printer-Specific Fixes and Corrections

- **Extended (X) Drivers:** Drivers now use correct default page size when creating new labels.
- **Sato M84 Pro II (X):** Using CG Times and CG Triumverate fonts no longer causes data to be cut off.
